## Chapter - 3 Atoms and Molecules

## Multiple Choice Questions

Q1. Which of the following correctly represents 360 g of water?
i) 2 moles of $\mathrm{H}_{2} \mathrm{O}$
ii) 20 moles of water
iii) $6.022 \times 10^{23}$ molecules of water
iv) $1.2044 \times 10^{25}$ molecules of water
a) Only i)
b) i) and iv)
c) ii) and iii)
d) ii) and iv)

Answer: Option d)
Points i) and iv) correctly represents 360 g of water.
ii) 1 mole of water = molar mass of water $=18 \mathrm{~g}$

So, $\quad 20$ moles of water $=18 \mathrm{~g} \times 20=360 \mathrm{~g}$
v) $\quad 6.022 \times 10^{23}$ molecules of water $=1$ mole $=18 \mathrm{~g}$ of water

So, $\quad 1.2044 \times 10^{25}$ molecules of water

$$
=\frac{18 \mathrm{~g} \times 1.2044 \times 10^{25}}{6.022 \times 10^{23}}=360 \mathrm{~g}
$$

Q2. Which of the following statements is not true about an atom?
a) Atoms are not able to exist independently
b) Atoms are the basic units from which molecules and ions are formed
c) Atoms are always neutral in nature
d) Atoms aggregate in large numbers to form the matter that we can see, feel or touch

Answer: Option d) Atoms aggregate in large numbers to form the matter that we can see, feel or touch

The ions and the molecules combined together to form matter. The individual molecules/ions are visible through naked eyes.

Q3. The chemical symbol for nitrogen gas is
a) Ni
b) $\mathrm{N}_{2}$
c) $N^{+}$
d) $N$

Answer: Option b) $\mathbf{N}_{2}$

## Q4. The chemical symbol for sodium is

a) So
b) $S d$
c) $N A$
d) Na

Answer: Option d) $\mathbf{N a}$

Q5. Which of the following would weigh the highest?
a) $\mathbf{0 . 2}$ mole of sucrose ( $\boldsymbol{C}_{12} \mathrm{H}_{22} \mathrm{O}_{11}$ )
b) 2 moles of $\mathrm{CO}_{2}$
c) 2 moles of $\mathrm{CaCO}_{3}$
d) $\mathbf{1 0}$ moles of $\mathrm{H}_{2} \mathrm{O}$

Answer: Option c) 2 moles of $\mathrm{CaCO}_{3}$
a) Mass of 1 mole of sucrose $\left(C_{12} H_{22} O_{11}\right)=(12 \times 12)+(1 \times 22)+(16 \times 11)=342 \mathrm{~g}$ 0.2 mole of sucrose $=342 \times 0.2=68.4 \mathrm{~g}$
b) Mass of 1 mole of $\mathrm{CO}_{2}=12+(16 \times 2)=44 \mathrm{~g}$ Mass of 2 moles of $\mathrm{CO}_{2}=44 \times 2=88 \mathrm{~g}$
c) Mass of 1 mole of $\mathrm{CaCO}_{3}=40+12+(16 \times 3)=100 \mathrm{~g}$ Mass of 2 moles of $\mathrm{CaCO}_{3}=100 \times 2=200 \mathrm{~g}$
d) Mass of 1 mole of $\mathrm{H}_{2} \mathrm{O}=2+16=18 \mathrm{~g}$

Mass of 10 moles of $\mathrm{H}_{2} \mathrm{O}=18 \times 10=180 \mathrm{~g}$

So, mass of 2 moles of $\mathrm{CaCO}_{3}$ is the highest i.e., 200 g .

Q6. Which of the following has maximum number of atoms?
a) 18 g of $\mathrm{H}_{2} \mathrm{O}$
b) 18 g of $\mathrm{O}_{2}$
c) 18 g of $\mathrm{CO}_{2}$
d) $\mathbf{1 8} \mathrm{g}$ of $\mathrm{CH}_{\mathbf{4}}$

Answer: Option d) 18 g of $\mathrm{CH}_{4}$
a) Number of atoms in 18 g of $\mathrm{H}_{2} \mathrm{O}$

$$
\begin{gathered}
=\frac{18}{18} \times 6.022 \times 10^{23} \times 3 \\
=18.066 \times 10^{23}=1.8066 \times 10^{24}
\end{gathered}
$$

b) Number of atoms in 18 g of $O_{2}$

$$
\begin{gathered}
=\frac{18}{32} \times 6.022 \times 10^{23} \times 2 \\
=3.387 \times 10^{23} \times 2=6.774 \times 10^{23}
\end{gathered}
$$

c) Number of atoms in 18 g of $\mathrm{CO}_{2}$

$$
=\frac{18}{44} \times 6.022 \times 10^{23} \times 3=7.390 \times 10^{23}
$$

d) Number of atoms in 18 g of $\mathrm{CH}_{4}$

$$
=\frac{18}{16} \times 6.022 \times 10^{23} \times 5=3.387 \times 10^{24}
$$

Thus, 18 g of $\mathrm{CH}_{4}$ have maximum number of atoms.

Q7. Which of the following contains maximum number of molecules?
a) $1 \mathrm{~g} \mathrm{CO}_{2}$
b) 1 g N
c) $1 \mathrm{~g} \mathrm{H}_{2}$
d) $\mathbf{1 g ~ C H} 4$

## Answer: Option c) $\mathbf{1} \mathbf{g ~ H}_{2}$

a) Number of molecules in $44 \mathrm{~g} \mathrm{CO}_{2}=6.022 \times 10^{23}$

Number of molecules in $1 \mathrm{~g} \mathrm{CO}_{2}$

$$
=\frac{6.022 \times 10^{23}}{44}=1.37 \times 10^{22}
$$

b) Number of molecules in $28 \mathrm{~g} \mathrm{~N}=6.022 \times 10^{23}$

Number of molecules in 1 g N

$$
=\frac{6.022 \times 10^{23}}{28}=2.15 \times 10^{22}
$$

c) Number of molecules in $2 \mathrm{~g} \mathrm{H} \mathrm{H}_{2}=6.022 \times 10^{23}$

Number of molecules in 1 g H

$$
=\frac{6.022 \times 10^{23}}{2}=3.011 \times 10^{23}
$$

d) Number of molecules in $16 \mathrm{~g} \mathrm{CH}_{4}=6.022 \times 10^{23}$

Number of molecules in $1 \mathrm{~g} \mathrm{CH}_{4}$

$$
=\frac{6.022 \times 10^{23}}{16}=3.76 \times 10^{22}
$$

So, $1 \mathrm{~g} \mathrm{H}_{2}$ have maximum number of molecules.

Q8. Mass of one atom of oxygen is
a) $\frac{16}{6.023 \times 10^{23}} g$
b) $\frac{32}{6.023 \times 10^{23}} g$
c) $\frac{1}{6.023 \times 10^{23}} g$
d) $8 u$

Answer: Option a) $\frac{16}{6.023 \times 10^{23}} g$
Mass of $6.023 \times 10^{23}$ atoms of oxygen $=$ gram atomic mass of oxygen
Mass of $6.023 \times 10^{23}$ atoms of oxygen $=16 \mathrm{~g}$
So, Mass of 1 atom of oxygen

$$
=\frac{16}{6.023 \times 10^{23}} g
$$

Q9. 3.42 g of sucrose are dissolved in 18 g of water in a beaker. The number of oxygen atoms in the solution are
a) $6.68 \times 10^{23}$
b) $6.09 \times 10^{22}$
c) $6.022 \times 10^{23}$
d) $6.022 \times 10^{21}$

Answer: Option a) $6.68 \times \mathbf{1 0}^{\mathbf{2 3}}$
Step - 1: Molar mass of sucrose, $C_{12} H_{22} O_{11}=12 \times 12+1 \times 22+16 \times 11=342 g$
Or, $342=1$ mole of sucrose
$3.42 \mathrm{~g}=0.01$ mole of sucrose
1 mole of sucrose $\left(C_{12} H_{22} O_{11}\right)$ have O atoms $=11 \times 6.022 \times 10^{23}$ atoms
0.01 mole of sucrose have, O atoms

$$
=0.01 \times 11 \times 6.022 \times 10^{23} \text { atoms }=6.6242 \times 10^{22}
$$

Step - 2: $\quad 18 \mathrm{~g}$ of water $\left(\mathrm{H}_{2} \mathrm{O}\right)=1$ mole of water 1 mole of water $\left(\mathrm{H}_{2} \mathrm{O}\right)$ contains O atoms $=6.022 \times 10^{23}$ atoms

Step - 3: adding the number of O atoms present in 3.42 g of sucrose and 18 g of water

$$
\begin{gathered}
6.022 \times 10^{23}+6.6242 \times 10^{22}=10^{22}(60.22+6.6242) \\
=66.844 \times 10^{22}=6.68 \times 10^{23} \text { atoms }
\end{gathered}
$$

Q10. A change in the physical state can be brought about
a) only when energy is given to the system
b) only when energy is taken out from the system
c) when energy is either given to, or taken out from the system
d) without any energy change

Answer: Option c) when energy is either given to, or taken out from the system
Any change in physical state can be brought when energy is either given or taken from the system, as change in energy help to change the magnitude of attractive forces between the particles, so change the physical states of matter.

## Short Answer Type Questions

Q11. Which of the following represents a correct chemical formula? Name it.
a) CaCl
b) $\mathrm{Bi}_{i} \mathrm{PO}_{4}$
c) $\mathrm{NaSO}_{4}$
d) NaS

## Answer: Option b)

The chemical name of $\mathrm{BiPO}_{4}$ is Bismuth phosphate.

Q12. Write the molecular formulae for the following compounds
a) Copper (II) bromide
b) Aluminium (III) nitrate
c) Calcium (II) phosphate
d) Iron (III) sulphide
e) Mercury (II) chloride
f) Magnesium (II) acetate

Answer: Positive ions are written first and then valences are interchanged:
a) Copper (II) bromide:

|  | Symbol | Valency |
| :--- | :---: | :---: |
| Potassium | $C u$ | $2+$ |
| Chlorine | $B r$ | $1-$ |

Formula $=\mathbf{C u B r}_{2}$
b) Aluminium (III) nitrate:

|  | Symbol | Valency |
| :--- | :---: | :---: |
| Aluminium | $A l$ | $3+$ |
| Nitrate | $N O$ | $1-$ |

Formula $=\boldsymbol{A l}\left(\mathrm{NO}_{3}\right)_{3}$
c) Calcium (II) phosphate:

|  | Symbol | Valences |
| :--- | :---: | :---: |
| Calcium | $C a$ | $2+$ |
| Phosphate | $P O$ | $3-$ |

Formula $=\boldsymbol{C a} \boldsymbol{a}_{3}\left(\mathrm{PO}_{4}\right)_{2}$
d) Iron (III) sulphide:

|  | Symbol | Valences |
| :--- | :---: | :---: |
| Iron | Fe | $3-$ |
| Sulphide | S | $2-$ |

Formula $=\boldsymbol{F e}_{2} \boldsymbol{S}_{3}$
e) Mercury (II) chloride

|  | Symbol | Valences |
| :--- | :---: | :---: |
| Mercury | Hg | $2+$ |
| Chloride | Cl | $1+$ |

$$
\text { Formula }=\mathrm{HgCl}_{2}
$$

f) Magnesium (II) acetate:

|  | Symbol | Valences |
| :--- | :---: | :---: |
| Magnesium | Mg | $2+$ |
| Acetate | $\mathrm{CH}_{3} \mathrm{COO}$ | $1-$ |

$$
\text { Formula }=\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2} \mathrm{Mg}
$$

Q13. Write the molecular formulae of all the compounds that can be formed by the combination of following ions.

$$
\mathrm{Cu}^{2+}, \mathrm{Na}^{+}, \mathrm{Fe}^{3+}, \mathrm{Cl}^{-}, \mathrm{SO}_{4}^{2-}, \mathrm{PO}_{4}^{3-}
$$

## Answer:

Compound of $\mathrm{Cu}^{2+}$
i) Combination with $\mathrm{Cl}^{-} \rightarrow \mathrm{Cu}^{2+} \quad \underset{\triangle}{ } \mathrm{Cl}^{1-}=\mathrm{CuCl}_{2}$
ii) Combination with $\mathrm{SO}_{4}^{2-} \rightarrow \mathrm{Cu}^{2+} \quad \mathrm{SO}_{4}^{2-}=\mathrm{CuSO}_{4}$
iii) Combination with $\mathrm{PO}_{4}^{3-} \rightarrow \mathrm{Cu}^{2+} \quad \longrightarrow \mathrm{PO}_{4}^{3-}=\mathrm{Cu}_{3}\left(\mathrm{PO}_{4}\right)_{2}$
i) Combination with $\mathrm{Cl}^{-} \rightarrow \mathrm{Na}^{1+} \quad \mathrm{Cl}^{1-}=\mathrm{NaCl}$
ii) Combination with $\mathrm{SO}_{4}^{2-} \rightarrow \mathrm{Na}^{1+} \mathrm{SO}_{4}^{2-}=\mathrm{Na}_{2} \mathrm{SO}_{4}$
iii) Combination with $\mathrm{PO}_{4}^{3-} \rightarrow \mathrm{Na}^{1+}$ PO $\mathrm{PO}_{4}^{3-}=\mathrm{Na}_{3} \mathrm{PO}_{4}$

Compound of $\mathrm{Fe}^{3+}$
i) Combination with $\mathrm{Cl}^{-} \rightarrow \mathrm{Fe}^{3+} \triangle \mathrm{Cl}^{1-}=\mathrm{FeCl}_{3}$
ii) Combination with $\mathrm{SO}_{4}^{2-} \rightarrow \mathrm{Fe}^{3+} \mathrm{SO}_{4}^{2-}=\mathrm{Fe}_{2}\left(\mathrm{SO}_{4}\right)_{3}$
iii) Combination with $\mathrm{PO}_{4}^{3-} \rightarrow \mathrm{Fe}^{3+} \mathrm{PO}_{4}^{3-}=\mathrm{FePO}_{4}$

Q14 Write the cations and anions presents (if any) in the following compounds.
a) $\mathrm{CH}_{3} \mathrm{COONa}$
b) NaCl
c) $\mathrm{H}_{2}$
d) $\mathrm{NH}_{4} \mathrm{NO}_{3}$

## Answer:

| S/No. | Compounds | Cation | Anion |
| :---: | :---: | :---: | :---: |
| i) | $\mathrm{CH}_{3} \mathrm{COONa}$ | $\mathrm{Na}^{+}$ | $\mathrm{CH}_{3} \mathrm{COO}^{-}$ |
| ii) | NaCl | $\mathrm{Na}^{+}$ | $\mathrm{Cl}^{-}$ |
| iii) | $\mathrm{H}_{2}$ | - | - |
| iv) | $\mathrm{NH}_{4} \mathrm{NO}_{3}$ | $\mathrm{NH}_{4}^{+}$ | $\mathrm{NO}_{3}^{-}$ |

Q15. Give the formulae of the compounds formed from the following sets of elements.
a) Calcium and fluorine
b) Hydrogen and sulphur
c) Nitrogen and hydrogen
d) Carbon and chlorine
e) Sodium and oxygen
f) Carbon and oxygen

Answer:

| S/No. | Set of Elements | Formulae of compounds |
| :---: | :--- | :--- |
| i) | Calcium and fluorine | $\mathrm{Ca}^{2} \triangle \mathrm{~F}^{1-}=\mathrm{CaF}_{2}$ |
| ii) | Hydrogen and sulphur | $\mathrm{H}^{1} \triangle S^{2-}=\mathrm{H}_{2} \mathrm{~S}$ |

| iii) | Nitrogen and hydrogen | $\mathrm{N}^{3-} \mathrm{H}^{1}=\mathrm{NH}_{3}$ |
| ---: | :--- | :--- |
| iv) | Carbon and Chlorine | $\mathrm{C}^{4+} \mathrm{Cl}^{1-}=\mathrm{CCl}_{4}$ |
| v) | Sodium and oxygen | $\mathrm{Na}^{1+} \mathrm{O}^{2-}=\mathrm{Na}_{2} \mathrm{O}$ |
| vi) | Carbon and oxygen | $\mathrm{C}^{4+} \mathrm{O}^{2-}=\mathrm{C}_{2} \mathrm{O}_{4}$ or $\mathrm{CO}_{2}$ |

Q16. Which of the following symbols of elements are incorrect? Give their correct symbols.
a) Cobalt CO
b) Carbon C
c) Aluminium AL
d) Helium He
e) Sodium So

## Answer:

a) Co is the correct symbol.
b) $C$ is the correct symbol.
c) $A l$ is the correct symbol.
d) $N a$ is the correct symbol.
e) He is the correct symbol of Helium.

Q17. Give the chemical formulae for the following compounds and compute the ratio by mass of the combining elements in each one of them.
a) Ammonia
b) Carbon monoxide
c) Hydrogen chloride
d) Aluminium fluoride
e) Magnesium sulphide

## Answer:

The chemical formulae of the compounds are ratio by mass of each combining element.

| S/No. | Compounds | Chemical <br> formula | Ratio by mass of the combining <br> elements |
| :---: | :--- | :---: | :---: |
| a) | Ammonia | $\mathrm{NH}_{3}$ | $N: H=14: 3$ |
| b) | Carbon monoxide | $C O$ | $C: O=12: 16=3: 4$ |
| c) | Hydrogen chloride | HCl | $\mathrm{H}: \mathrm{Cl}=1: 35.5$ |
| d) | Aluminium fluoride | $A l F_{3}$ | $\mathrm{Al}: F=27: 57=9: 19$ |
| e) | Magnesium sulphide | MgS | $\mathrm{Mg}: S=24: 32=3: 4$ |

Q18. State the number of atoms present in each of the following chemical species.
a) $\mathrm{CO}_{3}^{2-}$
b) $\mathrm{PO}_{4}^{3-}$
c) $\mathrm{P}_{2} \mathrm{O}_{5}$
d) Co

## Answer:

a) Number of atoms in $\mathrm{CO}_{3}^{2-}=$ number of C atoms + number of O atoms

$$
=1+3=4
$$

b) Number of atoms in $\mathrm{PO}_{4}^{3-}=$ number of P atoms + number of O atoms

$$
=1+4=5
$$

c) Number of atoms in $P_{2} O_{5}=$ number of P atoms + number of O atoms

$$
=2+5=7
$$

d) Number of atoms in $\mathrm{CO}=$ number of C atoms + number of O atoms

$$
=1+1=2
$$

Q19. What is the fraction of the mass of water due to neutrons?

## Answer:

In water molecules, $\left(\mathrm{H}_{2} \mathrm{O}\right)$
Number of neutrons $=[($ number of neutrons in $H) \times 2+($ number of neutrons in $O)]$

$$
=0 \times 2+8=8 \quad \text { (Since number of neutrons in } \mathrm{H}=\mathrm{O})
$$

Mass of 8 neutrons $=8 \times 1.00893=8.07 \quad$ (Since mass of 1 neutron $=1.008934$ )
Molar mass of water $=1.008 \times 2+16.0=18.016 u$

$$
=\frac{\text { mass of total neutrons in water }}{\text { molar mass of water }} \times 100
$$

$$
=\frac{8.07}{18.016} \times 100
$$

$$
=44.8 \%
$$

## Q20. Does the solubility of a substance change with temperature? Explain with the help of an example.

## Answer: Yes

Solubility changes with temperature.
Solubility is the maximum amount of a solute dissolved in a 100 g of solvent at a specific temperature.

## Effect of temperature on solubility

i) The solubility of solids with liquids, depend on change of the temperature increases and decreases as temperature decreases.
ii) The solubility of gases with liquids decreases as the temperature increases and increases as the temperature decreases.

## Example: -

Copper sulphate
copper sulphate soluble in water at different temperatures are:

| Temperature | $\mathbf{0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{1 0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{2 0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{3 0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{4 0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{5 0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{6 0}^{\boldsymbol{o}} \mathbf{C}$ | $\mathbf{7 0}^{\boldsymbol{o}} \mathbf{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Solubility of copper <br> sulpahte | $14 g$ | $17 g$ | $21 g$ | $24 g$ | $29 g$ | $34 g$ | $40 g$ | $47 g$ |

As temperature increases from $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$, the solubility of copper in water increases from 14 g to 47 g .

The solubility of a salt increases as the temperature is increased.

Q21. Classify each of the following on the basis of their atomicity.
a) $F_{2}$
b) $\mathrm{NO}_{2}$
c) $\mathrm{N}_{2} \mathrm{O}$
d) $\mathrm{C}_{2} \mathrm{H}_{6}$
e) $P_{4}$
f) $\mathrm{H}_{2} \mathrm{O}_{2}$
g) $\mathrm{P}_{4} \mathrm{O}_{4}$
h) $\mathrm{O}_{3}$
i) HCl
j) $\mathrm{CH}_{4}$
k) He
l) $\boldsymbol{A g}$

## Answer:

The classification is in three categories:
i) Monoatomic: $\mathrm{He}, \mathrm{Ag}$
ii) Diatomic: $\mathrm{F}_{2}, \mathrm{HCl}$
iii) Polyatomic: $\mathrm{NO}_{2}, \mathrm{~N}_{2} \mathrm{O}, \mathrm{C}_{2} \mathrm{H}_{6}, \mathrm{P}_{4}, \mathrm{H}_{2} \mathrm{O}_{2}, \mathrm{P}_{4} \mathrm{O}_{10}, \mathrm{O}_{3}, \mathrm{CH}_{4}$

Q22. You are provided with a fine white coloured powder which is either sugar or salt. How would you identify it without testing?

## Answer:

To differentiate sugar and salt without testing:
i) Dissolving sugar and salt separately in alcohol, salt do not dissolve but sugar dissolve in it.
ii) Heating the salt separately, melt the sugar but salt do not melt.
iii) Dissolving, two separately in water. The electricity is conducted by the salt solution due to the presence of $\mathrm{Na}^{+}$ion and $\mathrm{Cl}^{-}$ion, but sugar solution is a nonconductor. So, testing a drop of solution with an ohmmeter, immediate difference is observed.

Q23. Calculate the number of moles of magnesium present in a magnesium ribbon weighing 12 g . Molar atomic mass of magnesium is $\mathbf{2 4} \mathrm{g} \mathrm{mol}^{-1}$.

## Answer:

Molar atomic mass of $M g=24 \mathrm{~g} \mathrm{~mol}^{-1}$

$$
\begin{gathered}
24 g \text { of } M g=1 \mathrm{~mol} \\
12 g \text { of } M g=\frac{1 \times 12}{24} \\
=\frac{1}{2}=0.5 \mathrm{~mol}
\end{gathered}
$$

## Long Answer Type Questions

## Q24. Verify by calculating that

a) 5 moles of $\mathrm{CO}_{2}$ and 5 moles of $\mathrm{H}_{2} \mathrm{O}$ do not have the same mass.
b) 240 g of calcium and 240 g magnesium elements have a mole ratio of $3: 5$

## Answer:

a) Molar mass of $\mathrm{CO}_{2}=12+2 \times 16=12+32=44 \mathrm{~g} \mathrm{~mol}^{-1}$

1 mole of $\mathrm{CO}_{2}$ has mass $=44 \mathrm{~g}$
5 moles of $\mathrm{CO}_{2}$ have mass $=44 \times 5=200 \mathrm{~g}$
the molar mass of $\mathrm{H}_{2} \mathrm{O}=2 \times 1+16=18 \mathrm{~g} \mathrm{~mol}^{-1}$
1 mole of $\mathrm{H}_{2} \mathrm{O}$ has mass $=18 \mathrm{~g}$
5 moles of $\mathrm{H}_{2} \mathrm{O}$ have mass $=18 \times 5=90 \mathrm{~g}$
So, 5 moles of $\mathrm{CO}_{2}$ and $\mathrm{H}_{2} \mathrm{O}$ do not have same mass.
b) Molar mass of calcium $=40 \mathrm{~g}$

40 g of $C a$ has number of moles $=1 \mathrm{~mol}$
240 g of $C a$ has number of moles $=\frac{1}{40} \times 240=6 \mathrm{~mol}$

Molar mass of magnesium $=24 \mathrm{~g}$
24 g of Mg has number of moles $=1 \mathrm{~mol}$
240 g of Mg has number of moles $=\frac{1}{24} \times 240=10 \mathrm{~mol}$

$$
\frac{\text { Number of moles of } C a}{\text { Number of moles of } M g}=\frac{6}{10}=\frac{3}{5}=3: 5
$$

So, 240 g of calcium and magnesium elements have a mole ratio of 3:5

Q25. Find the ratio by mass of the combining elements in the following compounds.
a) $\mathrm{CaCO}_{3}$
b) $\mathrm{MgCl}_{2}$
c) $\mathrm{H}_{2} \mathrm{SO}_{4}$
d) $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$
e) $\mathrm{NH}_{3}$
f) $\mathrm{Ca}(\mathrm{OH})_{2}$

Answer: The ratio by mass of combining elements are -
a) $\mathrm{CaCO}_{3} \rightarrow \mathrm{Ca}: \mathrm{C}: O=40: 12: 48=10: 3: 12$
b) $\mathrm{MgCl}_{2} \rightarrow \mathrm{Mg}: \mathrm{Cl}=24: 2 \times 35.5=24: 71$
c) $\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{H}: \mathrm{S}: \mathrm{O}=2 \times 1: 32: 4 \times 16=2: 32: 64=1: 16: 32$
d) $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH} \rightarrow \mathrm{C}: \mathrm{H}: \mathrm{O}=2 \times 12: 6 \times 1: 16=24: 6: 16=12: 3: 8$
e) $\mathrm{NH}_{3} \rightarrow \mathrm{~N}: \mathrm{H}=14: 3 \times 1=14: 3$
f) $\mathrm{Ca}(\mathrm{OH})_{2} \rightarrow \mathrm{Ca}: \mathrm{O}: \mathrm{H}=40: 2 \times 16: 2 \times 1=40: 32: 2=20: 16: 1$

Q26. Calcium chloride when dissolved in water dissociates into its ions according to the following equation.

$$
\mathrm{CaCl}_{2}(\mathrm{aq}) \rightarrow \mathrm{Ca}^{2+}(\mathrm{aq})+2 \mathrm{Cl}^{-}(\mathrm{aq})
$$

Calculate the number of ions obtained from CaCl $_{2}$ when 222 g of it is dissolved in water.

## Answer:

Molar mass of $\mathrm{CaCl}_{2}=40+2 \times 35.5$

$$
=40+71=111 \mathrm{~g} \mathrm{~mol}^{-1}
$$

$\mathrm{CaCl}_{2}$ ionizes:

$$
\mathrm{CaCl}_{2}(a q) \rightarrow \mathrm{Ca}^{2+}(a q)+2 \mathrm{Cl}^{-1}(a q)
$$

111 g of $\mathrm{CaCl}_{2}=3 \mathrm{~mol}=3 \times 6.022 \times 10^{23}$ ions
$222 g$ of $\mathrm{CaCl}_{2}$ have,

$$
\begin{gathered}
=\frac{3 \times 6.022 \times 10^{23}}{111} \times 222 \\
=36.132 \times 10^{23} \\
=3.6132 \times 10^{24} \mathrm{ions}
\end{gathered}
$$

Q27. The difference in the ass of 100 moles each of sodium atoms and sodium ion is 5.48002 g . Compute the mass of an electron.

Answer:

$$
N a \rightarrow N a^{+}+e^{-}
$$

Sodium atom loose an electron to $f$ sodium ion,
100 moles of sodium and sodium ion, the difference is $100 e^{-}$. As, the mass of 100 moles of electrons $=5.48002 \mathrm{~g}$

Mass of 1 mole of electron,

$$
=\frac{5.48002}{100} g
$$

As, 1 mole $=6.022 \times 10^{23}$ electrons
mass of $6.022 \times 10^{23}$ electrons

$$
\begin{gathered}
=\frac{5.48002}{100} \mathrm{~g} \\
\text { Mass of } 1 \text { electron }=\frac{5.48002}{100 \times 6.022 \times 10^{23}} \\
=9.1 \times 10^{-26} \mathrm{~g}
\end{gathered}
$$

So, the mass of an electron $=9.1 \times 10^{-26} \mathrm{~g}$

Q28. Cinnabar ( HgS ) is a prominent ore of mercury. How many grams of mercury are present in 225 g of pure HgS ? Molar mass of Hg and $S$ are $200.6 \mathrm{~g} \mathrm{~mol}^{-1}$ and 32 g mol $^{-1}$ respectively.

## Answer:

Molar mass of $\mathrm{Hg}=200.6 \mathrm{~g} \mathrm{~mol}^{-1}$

$$
\text { Of } S=32 \mathrm{~g} \mathrm{~mol}^{-1}
$$

Molar mass of $\mathrm{HgS}=$ molar mass of the $\mathrm{Hg}+$ molar mass of the S
Molar mass of $\mathrm{HgS}=200.6+32=232.6 \mathrm{~g}$
232.6 g of HgS contains $\mathrm{Hg}=200.6$

225 g of HgS will contain Hg

$$
=\frac{200.6 \times 225}{232.6}=194.05 \mathrm{~g}
$$

So, $194.05 g$ of mercury is in $225 g$ of pure Cinnabar.

Q29. The mass of one steel screw is 4.11 g . Find the mass of one mole of these steel screws. Compare this value with the mass of the earth $\left(5.98 \times 10^{\mathbf{2 4}} \mathbf{~ k g}\right)$. Which one of the two is heavier and by how many times?

Answer:
Mass of one steel screw $=4.11 \mathrm{~g}$

$$
\begin{aligned}
& \text { Mass of earth }=5.98 \times 10^{24} \mathrm{~kg} \\
&=5.98 \times 10^{27} \mathrm{~g}
\end{aligned}
$$

Since, 1 mole $=6.022 \times 10^{23}$ atoms $/$ molecules $/$ ions
So, mass of 1 mole of screw $=6.022 \times 10^{23} \times 4.11 \mathrm{~g}$

$$
\begin{gathered}
=2.48 \times 10^{24} \mathrm{~g} \\
\frac{\text { Mass of } 1 \text { mole screw }}{\text { Mass of earth }}=\frac{2.48 \times 10^{24} \mathrm{~g}}{5.98 \times 10^{27} \mathrm{~g}} \\
=\frac{1}{2.41 \times 10^{3}}=\frac{1}{2410}
\end{gathered}
$$

The ratio of screw and mass of earth $=1: 2410$
So, the earth is heavier than screw by 2410 times.

Q30. A sample of vitamin $C$ is known to contain $2.58 \times \mathbf{1 0}^{\mathbf{2 4}}$ oxygen atoms. How many moles of oxygen atoms are present in the sample?

## Answer:

Number of oxygen atoms in sample $=2.58 \times 10^{24}$
$1 \mathrm{~mol}=6.022 \times 10^{23}$ oxygen atoms

$$
\begin{gathered}
2.58 \times 10^{24} \text { oxygen atoms }=\frac{2.58 \times 10^{24}}{6.022 \times 10^{23}} \\
2.58 \times 10^{24} \text { oxygen atoms }=4.28 \mathrm{~mol}
\end{gathered}
$$

So, 4.28 mol of oxygen atoms are present in the sample.

## Q31. Raunak took 5 moles of carbon atoms in a container and Krish also took 5 moles of sodium atoms in another container of same weight.

a) Whose container is heavier?
b) Whose container has more number of atoms?

## Answer:

a) 1 mole $=$ molar mass of a substance

1 mole of carbon atoms weigh $=12 \mathrm{~g}$
5 moles of carbon atoms will weigh $=12 \times 5=60 \mathrm{~g}$
Container of Raunak has weight $=60 \mathrm{~g}$

1 mole of sodium atoms weigh $=23 \mathrm{~g}$
5 moles of sodium atoms will have weigh $=23 \times 5=115 \mathrm{~g}$
Container of Krish has weight $=115 \mathrm{~g}$
The container of Krish is heavier than Raunak's container.

$$
1 \text { mole }=6.022 \times 10^{23} \text { atoms }
$$

b) Both the containers have 5 moles of each carbon and sodium, so, both the containers have an equal number of atoms, that is,
$5 \times 6.022 \times 10^{23}$ atoms or $3.011 \times 10^{24}$ atoms in each.

Q32. Fill in the missing data in the following table.

| Species property | $\mathbf{H}_{\mathbf{2}} \mathbf{O}$ | $\mathbf{C O}_{\mathbf{2}}$ | $\mathbf{N a}-\boldsymbol{a t o m}$ | $\mathbf{M g C l}_{\mathbf{2}}$ |
| :--- | :---: | :---: | :---: | :---: |
| Number of moles | 2 | - | - | 0.5 |
| Number of particles | - | $3.011 \times 10^{23}$ | - | - |
| Mass | 36 g | - | 115 g | - |

## Answer:

For $\mathrm{H}_{2} \mathrm{O}$ (Water): -

$$
\begin{aligned}
& \text { number of moles }=2 \\
& \text { Number of mass }=36 \mathrm{~g}
\end{aligned}
$$

ACADEMY OF EXCELLENCE

Number of particles $=$ number of moles $\times 6.022 \times 10^{23}$

$$
\begin{gathered}
=2 \times 6.022 \times 10^{23} \\
=1.2044 \times 10^{24}
\end{gathered}
$$

## $\mathrm{CO}_{2}$ (Carbon dioxide): -

$$
\begin{aligned}
& \text { number of particles }=3.011 \times 10^{23} \\
& \qquad \begin{array}{r}
\text { Number of moles of } \mathrm{CO}_{2}=\frac{\text { number of particles }}{6.022 \times 10^{23}} \\
\\
=\frac{3.011 \times 10^{23}}{6.022 \times 10^{23}}=0.5 \mathrm{~mol}
\end{array}
\end{aligned}
$$

Mass of $\mathrm{CO}_{2}=$ moles $\times$ molar mass

$$
=0.5 \times 44=22 \mathrm{~g} \quad\left(\text { molar mass of } \mathrm{CO}_{2}=12+2 \times 16=44\right)
$$

## For Na -atom

$$
\text { mass }=115 \mathrm{~g}
$$

$$
\text { Number of moles }=\frac{\text { mass }}{\text { molar mass }}=\frac{115}{23}=5 \mathrm{~mol}
$$

Number of particles $=5 \times 6.022 \times 10^{23}=3.011 \times 10^{24}$

## For $\mathrm{MgCl}_{2}$

$$
\begin{aligned}
& \text { number of moles }=0.5 \\
& \text { number of particles }=0.5 \times 6.022 \times 10^{23}=3.011 \times 10^{23} \\
& \qquad \text { Mass }=\text { number of moles } \times \text { molar mass } \\
& \text { (molar mass of } \mathrm{MgCl}_{2}=24+2 \times 35.5=24+71=95 \text { ) }
\end{aligned}
$$

$$
\begin{gathered}
=0.5 \times 95 \\
=47.5 \mathrm{~g}
\end{gathered}
$$

| Species property | $\mathbf{H}_{\mathbf{2}} \mathbf{O}$ | $\mathbf{C O}_{\mathbf{2}}$ | $\boldsymbol{N a}-\boldsymbol{a t o m}$ | $\boldsymbol{M g C l}_{\mathbf{2}}$ |
| :--- | :---: | :---: | :---: | :---: |
| Number of moles | 2 | 0.5 | 5.0 | 0.5 |
| Number of particles | $1.2044 \times 10^{24}$ | $3.011 \times 10^{23}$ | $3.011 \times 10^{24}$ | $3.011 \times 10^{23}$ |
| Mass | 36 g | 22 g | 115 g | 47.5 g |

Q33. The visible universe is estimated to contain $\mathbf{1 0}^{\mathbf{2 2}}$ stars. How many moles of stars are present in the visible universe?

ACADEMY OF EXCELLENCE

## Answer:

$$
\begin{gathered}
1 \text { moles stars }=6.022 \times 10^{23} \\
10^{22}=\frac{1 \times 10^{22}}{6.022 \times 10^{23}} \\
10^{22}=1.67 \times 10^{-2} \mathrm{~mol}
\end{gathered}
$$

Q34. What is SI prefix for each of the following multiples and submultiples of a unit?
a) $10^{3}$
b) $10^{-1}$
c) $10^{-2}$
d) $10^{-6}$
e) $10^{-9}$
f) $10^{-12}$

## Answer:

S.I prefix of each of the multiples of submultiples of a unit -

| S/No. | Prefix | Unit |
| :---: | :---: | :---: |
| 1. | $10^{3}$ | kg |
| 2. | $10^{-1}$ | deci |
| 3. | $10^{-2}$ | centi |
| 4. | $10^{-6}$ | micro |
| 5. | $10^{-9}$ | nano |
| 6. | $10^{-12}$ | pico |

Q35. Express each of the following in kilograms.
a) $5.84 \times 10^{-3} \mathrm{mg}$
b) 58.34 g
c) 0.584 g
d) $5.873 \times 10^{-21} g$

## Answer:

a)

$$
\begin{gathered}
10^{6} \mathrm{mg}=1 \mathrm{~kg} \\
5.84 \times 10^{-3} \mathrm{mg}=\frac{1 \times 5.84 \times 10^{-3}}{10^{6}} \mathrm{~kg} \\
=5.84 \times 10^{-9} \mathrm{~kg}
\end{gathered}
$$

b)

$$
\begin{gathered}
10^{3} \mathrm{~g}=1 \mathrm{~kg} \\
58.34 \mathrm{~g}=\frac{1 \times 58.34}{10^{3}} \mathrm{~kg} \\
=5.834 \times 10^{-3} \mathrm{~kg}
\end{gathered}
$$

c) 0.584 g

$$
\begin{gathered}
0.584 \mathrm{~g}=\frac{1 \times 0.584}{10^{3}} \mathrm{~kg} \\
\quad=0.584 \times 10^{-3} \mathrm{~kg} \\
\quad=5.84 \times 10^{-4} \mathrm{~kg}
\end{gathered}
$$

d) $5.873 \times 10^{-21} \mathrm{~g}$

$$
\begin{gathered}
5.873 \times 10^{-21}=\frac{5.873 \times 10^{-21}}{10^{3}} \mathrm{~kg} \\
=5.873 \times 10^{-24} \mathrm{~kg}
\end{gathered}
$$

Q36. Compute the difference in masses of $10^{3}$ moles each of magnesium atoms and magnesium ions.

## Answer:

$$
\begin{gathered}
10^{3} \text { moles of } \mathrm{Mg} \text { atoms }=10^{3} \times 6.022 \times 10^{23} \\
=6.022 \times 10^{26} \mathrm{Mg} \text { atoms }
\end{gathered}
$$

So, for ions

$$
\begin{gathered}
10^{3} \text { moles of } \mathrm{Mg}^{2+} \text { atoms }=10^{3} \times 6.022 \times 10^{23} \\
=6.022 \times 10^{26} \mathrm{Mg}^{2+} \text { ions }
\end{gathered}
$$

$M g^{2+}$ ion is formed from $M g$ atom with the loss of 2 electrons;

$$
M g \rightarrow M g^{2+}+2 e^{-}
$$

The difference in mass of $6.022 \times 10^{26} \mathrm{Mg}$ atoms and $\mathrm{Mg}^{2+}$ ions

$$
\begin{aligned}
& =\text { mass of } 2 \times 6.022 \times 10^{26} \text { electrons } \\
& =2 \times 6.022 \times 10^{26} \times 9.1 \times 10^{-31} \mathrm{~kg}
\end{aligned}
$$

$\left(\right.$ mass of an electron $\left.=9.1 \times 10^{-31} \mathrm{~kg}\right)$

$$
\begin{aligned}
= & 109.6004 \times 10^{-5} \mathrm{~kg} \\
& =1.096 \times 10^{-3} \mathrm{~kg}
\end{aligned}
$$

## Q37. Which has more number of atoms?

$$
100 \mathrm{~g} \text { of } \mathrm{N}_{2} \text { or } 100 \mathrm{~g} \text { of } \mathrm{NH}_{3}
$$

## Answer:

molar mass of

$$
N_{2}=2 \times 14=28 g
$$

28 g of $N_{2}$ has number of molecules $=6.022 \times 10^{23}$

100 g of $N_{2}$ has number of molecules,

$$
=\frac{6.022 \times 10^{23} \times 100}{28}=2.1 \times 10^{24}
$$

## Atoms in 100 g of $N_{2}=2.1 \times 10^{24} \times 2$

$$
=4.2 \times 10^{24} \text { atoms }
$$

Molar mass of $\mathrm{NH}_{3}=14+3 \times 1=17 \mathrm{~g}$
$17 \mathrm{~g} \mathrm{NH}_{3}$ has number of molecules $=6.022 \times 10^{23}$

$$
\begin{gathered}
100 \mathrm{~g} \mathrm{NH}_{3} \text { has number of molecules }=\frac{6.022 \times 10^{23} \times 100}{17} \\
100 \mathrm{~g} \mathrm{NH}_{3} \text { has number of molecules }=3.54 \times 10^{24}
\end{gathered}
$$

Atoms in 100 g of $\mathrm{NH}_{3}=3.54 \times 10^{24} \times 4=1.416 \times 10^{25}$

100 g of $\mathrm{NH}_{3}$ has greater number of atoms.

Q38. Compute the number of ions present in 5.85 g of sodium chloride.
Answer:
The molar mass of sodium chloride $=23+35.5=58.5 \mathrm{~g}$
58.5 g of sodium, $(\mathrm{NaCl})$ has number of ions $=6.02 \times 10^{23} \times 2$

$$
\begin{array}{clll}
\mathrm{NaCl} & \rightarrow & \mathrm{Na}^{+} & +\quad \mathrm{Cl}^{-} \\
\text {Sodium chloride } & & \text { Sodium ion } & \text { Chloride ion }
\end{array}
$$

5.85 g of NaCl has number of ions,

$$
\begin{gathered}
=\frac{6.022 \times 10^{23} \times 2 \times 5.85}{58.5} \\
=12.044 \times 10^{22} \\
=1.2044 \times 10^{23}
\end{gathered}
$$

Q39. A gold sample contains $\mathbf{9 0} \%$ of gold and the rest copper. How many atoms of gold are present in one gram of this sample of gold?

## Answer:

mass of the sample $=100 \mathrm{~g}$

$$
\text { Mass of gold }=90 \mathrm{~g}
$$

$$
\text { Mass of copper }=(100-90)=10 g
$$

100 g of sample has gold $=90 \mathrm{~g}$
$1 g$ of this sample has gold,

$$
=\frac{90}{100}
$$

$1 g$ of this sample has gold $=0.9 g$

Atomic mass of gold $(A u)=197 \mathrm{~g}$
197 g of gold have number of atoms $=6.022 \times 10^{23}$
0.9 g of gold will have number of atoms,

$$
=\frac{6.022 \times 10^{23} \times 0.9}{197}
$$

0.9 g of gold will have number of atoms $=2.75 \times 10^{21}$

Q40. What are ionic and molecular compounds? Give examples.

## Answer:

Ionic compound are made up of ions. In ionic compounds, the cations or positively charged ions and anions or negatively charged ions are held together by a strong electrostatic force of attraction and are called as electrovalent bond.

Example: Sodium ( NaCl ), Calcium oxide ( CaO ) etc.

Molecular compounds are those compounds in which the atoms of elements have covalent bonds.

Example: - Methane $\left(\mathrm{CH}_{4}\right)$, Water $\left(\mathrm{H}_{2} \mathrm{O}\right)$

Q41. Compute the difference in masses of one mole each of aluminium atoms and one mole of its ions (Mass of an electron is $9.1 \times 10^{-\mathbf{2 8}} \mathrm{g}$ ). Which one is heavier?

Answer:
The ionization of $A l$ atom is,

$$
A l \rightarrow A l^{3+}+3 e^{-}
$$

$A l^{3+}$ ions are formed by loss of 3 electrons of $A l$ atoms
Difference in the mass of 1 mole of $A l$ atoms and $A l^{3+}$ ions

$$
=\text { mass of } 3 \times 6.022 \times 10^{-28} \text { electrons }
$$

the mass of electron $=9.1 \times 10^{-28} \mathrm{~g}$

$$
\begin{gathered}
=\left(3 \times 6.022 \times 10^{23}\right) \times\left(9.1 \times 10^{-28} \mathrm{~g}\right) \\
=164.4 \times 10^{-5} \mathrm{~g} \\
=1.644 \times 10^{-3} \mathrm{~g}
\end{gathered}
$$

1 mole of $A l$ atoms is heavier than 1 mole of $A l^{3+}$ ions.

Q42. A silver ornament of mass ' $m$ ' gram is polished with gold equivalent to $1 \%$ of the mass of silver. Compute the ratio of the number of atoms of gold and silver in the ornament.

## Answer: -

Mass of silver ornament $(\mathrm{Ag})=m . g m s$
Mass of gold used for polishing,

$$
\begin{gathered}
=\frac{1}{100} \times m \mathrm{gms} \\
=0.01 \mathrm{mgms}
\end{gathered}
$$

Atomic mass of $\mathrm{Ag}=108 u$

> 1 mole of $\mathrm{Ag}=108 \mathrm{gms}=6.022 \times 10^{23}$ atoms
> 108 gms of Ag have atoms $=6.022 \times 10^{23}$
m. gms of Ag will have atoms,

$$
=\frac{6.022 \times 10^{23}}{108} \times m
$$

atomic mass of gold $(A u)=197 u$

$$
\begin{aligned}
& 1 \text { mole of } A u=197 \mathrm{~g} \\
& =6.022 \times 10^{23} \text { atoms }
\end{aligned}
$$

$$
197 \mathrm{~g} \text { of } \mathrm{Au} \text { have atoms }=6.022 \times 10^{23}
$$

0.01 mg of Au will have atoms,

$$
=\frac{6.022 \times 10^{23} \times 0.01 \mathrm{~m}}{197}
$$

So, the ratio of the number of atoms of gold and silver,

$$
\begin{aligned}
=\frac{6.022 \times 10^{23}}{197} & \times 0.01 \mathrm{~m}: \frac{6.022 \times 10^{23}}{108} m \\
= & \frac{1}{19700}: \frac{1}{108}
\end{aligned}
$$

Ratio of the number of atoms of gold and silver $=108: 19700$

Q43. A sample of ethane ( $\mathrm{C}_{2} \mathrm{H}_{6}$ ) gas has the same mass as $1.5 \times 10^{\mathbf{2 0}}$ molecules of methane ( $\mathrm{CH}_{4}$ ). How many $\mathrm{C}_{2} \mathrm{H}_{6}$ molecules does the sample of gas contain?

## Answer:

Molar mass of methane $\left(\mathrm{CH}_{4}\right)=6.022 \times 10^{23}$ molecules of methane

$$
=12+4 \times 1=16 g
$$

$1.5 \times 10^{20}$ molecules of methane have mass,

$$
\begin{aligned}
& =\frac{16 \times 15 \times 10^{20}}{6.022 \times 10^{23}} \\
& =3.98 \times 10^{-3} \mathrm{~g}
\end{aligned}
$$

Molar mass of ethane $\left(C_{2} H_{6}\right)=2 \times 12+6 \times 1$

$$
=24+6=30 g
$$

30 g of ethane has number of molecules $=6.022 \times 10^{23}$
$3.98 \times 10^{-3} g$ of ethane has number of molecules,

$$
\begin{gathered}
=\frac{6.022 \times 10^{23} \times 3.98 \times 10^{-3}}{30 g} g \\
=7.99 \times 10^{19}
\end{gathered}
$$

$3.98 \times 10^{-3} \mathrm{gms}$ of ethane has number of molecules $=8 \times 10^{19}$ molecules

Q44. Fill in the blanks.
a) In a chemical reaction, the sum of the masses of the reactants and products remains unchanged. This is called $\qquad$
b) A group of atoms carrying a fixed charge on them is called $\qquad$
c) The formula unit mass of $\mathrm{Ca}_{3}\left(\mathrm{PO}_{4}\right)_{2}$ is $\qquad$
d) Formula of sodium carbonate is $\qquad$ and that of ammonium sulphate is

## Answer:

a) law of conservation of mass.
b) polyatomicion.
c) 310 g .
d) $\mathrm{Na}_{2} \mathrm{CO}_{3}$ and $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4}$

Q45. Complete the following crossword puzzle (Figure) by using the name of the chemical elements. Use the data given in the table following.
2. The element used by Rutherford during his $\alpha$-scattering experiment
3. An element which forms rust on exposure to moist air
5. A very reactive non-metal stored under water
7. Zinc metal when treated with dilute hydrochloric acid produces a gas of this element which when tested with burning splinter produces a pop sound.

## Down

1. A white lustrous metal used for making ornaments and which tends to get tarnished black in the presence of moist air
2. Both brass and bronze are alloys of the element
3. The metal which exists in the liquid state at room temperature
4. An element with symbol Pb
academy of excellence

## Answer:

1. Silver
2. Gold
3. Iron
4. Copper
5. Phosphorus
6. Mercury
7. Hydrogen
8. Lead

Q46. a) In this crossword puzzle (Figure), names of 11 elements are hidden. Symbols of these are given below. Complete the puzzle.

1. Cl
2. $H$
3. $\boldsymbol{A r}$
4. $O$
5. $X e$
6. $N$
7. He
8. $F$
9. $K r$
10. Rn
11. Ne

## Answer:

The names of the elements are -

| S/No. | Chemical Symbol of these <br> elements | Name of these elements |
| :---: | :---: | :---: |
| $\mathbf{1 .}$ | Cl | Chlorine |
| $\mathbf{2}$. | $H$ | Hydrogen |
| $\mathbf{3}$. | Ar | Argon |
| $\mathbf{4}$. | $O$ | Oxygen |
| $\mathbf{5}$. | Xe | Xenon |
| $\mathbf{6}$. | N | Nitrogen |
| $\mathbf{7 .}$ | He | Helium |
| $\mathbf{8}$. | $F$ | Fluorine |
| $\mathbf{9 .}$ | Kr | Krypton |
| $\mathbf{1 0}$ | $R n$ | Radon |
| $\mathbf{1 1}$ | Ne | Neon |

Q47. Write the formulae for the following and calculate the molecular mass for each one of them.
a) Caustic potash.
b) Baking powder.
c) Lime stone.
d) Caustic soda.
e) Ethanol.
f) Common salt.

## Answer:

| S/No. | Compound | Formula | Molecular mass |
| ---: | :---: | :---: | :---: |
| 1. | Caustic potash | KOH | $39+16+1=56 u$ |
| 2. | Baking soda | $\mathrm{NaHCO}_{3}$ | $23+1+12+3 \times 16=84 u$ |
| 3. | Lime stone | $\mathrm{CaCO}_{3}$ | $40+12+3 \times 16=100 \mathrm{u}$ |
| 4. | Caustic soda | NaOH | $23+16+1=40 u$ |
| 5. | Ethanol | $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$ | $2 \times 12+5 \times 1+16+1=46 u$ |
| 6. | Common salt | NaCl | $23+35.5=58.5 \mathrm{u}$ |

Q48. In photosynthesis, 6 molecules of carbon dioxide combine with an equal number of water molecules through a complex series of reactions to give a molecule of glucose having a molecular formula $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$. How many grams of water would be required to produce 18 g of glucose? Compute the volume of water so consumed assuming the density of water to be $1 \mathrm{~g} \mathrm{~cm}^{-3}$.

ACADEMY OF EXCELLENCE

## Answer:

In the process of photosynthesis, the reactions is -

$$
\begin{aligned}
& 6 \mathrm{CO}_{2}+6 \mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}+6 \mathrm{O}_{2} \\
& 6(2 \times 1+16) \\
&= 6 \times 18 \\
&= 108 \mathrm{~g}
\end{aligned}
$$

Molecular formula of glucose $\left(\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}\right)=6 \times 12+12 \times 1+6 \times 16$

$$
\begin{gathered}
=72+12+96 \\
=108 \mathrm{~g}
\end{gathered}
$$

180 g of glucose require the amount of water $=108 \mathrm{~g}$
$18 g$ of glucose will require the amount of water,

$$
\begin{gathered}
=\frac{108 \mathrm{~g} \times 18 \mathrm{~g}}{180 \mathrm{~g}} \\
=10.8 \mathrm{~g}
\end{gathered}
$$

Amount of water consumed $=10.8 \mathrm{~g}$
The density ( d ) of water $=1 \mathrm{~g} \mathrm{~cm}^{-3}$
the volume of water consumed is,

$$
\begin{gathered}
=\frac{m}{d}\left[\text { As } d=\frac{m}{v}\right] \\
=\frac{10.8 \mathrm{~g}}{1 \mathrm{~g} \mathrm{~cm}^{-3}} \\
=10.8 \mathrm{~cm}^{3}
\end{gathered}
$$

Volume (V) of water consumed $=10.8 \mathrm{~cm}^{3}$
